1. About This Start-up Guide

1.1 WHAT THIS START-UP GUIDE COVERS

Welcome to the **MORGAN Auction System** User's Start-up Guide. This start-up guide gives an overview to how to use the **MORGAN System** User's Interface to perform the participant tasks to buy transmission capacity on boundaries between cross-border countries and to nominate the exchanges programs.

1.2 HOW THIS START-UP GUIDE IS ORGANIZED

This start-up guide includes the following chapters:

- **About This Start-up Guide:** This chapter describes what this start-up guide covers, who should read it, how it's organized, and the conventions it uses.
- **Introduction to MORGAN System:** Provides an overview of the MORGAN system, its components and what it does. Explains terms and concepts users need to know when working with the MORGAN system.
- **MORGAN System Features:** Presents the Graphic User Interface (GUI) screens and features. Explains basic GUI tasks, such as logging in and menu navigation to help the user get around the Auction system tool.
- **Participant Tasks:** Explains how to perform the individual tasks to deal with transmission capacity. They include:
 1. Auction process, to explain how the Allocation Service Company will run the explicit capacity auction.
 2. Bidding, to explain how to make and change bids using the tool.
 3. Default Bidding, to explain how to make and change default bids using the tool.
 4. Auction Allocation results, to help the user to interpret the auction final results.
 5. Management of Capacity Right Portfolios, to follow the update of capacity rights after auction allocation, auction cancellation, secondary market and capacity curtailment
 6. Management of Programming Authorizations, to be used by participants in the nomination process
 7. 8.Nominations, to explain how to make and change nominations using the tool.

Participant Start up User's Guide	Rev 11.4
-----------------------------------	----------

1.3 DEFINITIONS

The project must adopt standard definitions used in ENTSO papers. Complete documentation could be found on the following website:

<https://www.entsoe.eu/publications/electronic-data-interchange-edilibrary/work%20products/Pages/default.aspx> .

Term	Meaning (within the context of this document)
ATC	Available Transfer Capacity : the ATC is the part of NTC that remains available, after each phase of the allocation procedure, for further commercial activity. ATC is given by the following equation : $ATC = NTC - AAC \text{ (Net Transfert Capacity - Already Allocated Capacity)}$
CT	Capacity Trader : acquires capacity on the capacity market through the primary market organised by the Transmission Capacity Allocator or through the secondary market. The capacity in question may be acquired on behalf of an Interconnection Trade Responsible or acquired to be sold/transferred on the secondary market.
GUI	Graphical User Interface
ITR	Interconnection Trade Responsible : Is a Balance Responsible Party on behalf of a Registered User. He is recognised by the Nomination Validator for the nomination of already allocated capacity.
MW	Mega Watts
Nominations	The notification to the TSOs by a User of his schedules relating to the capacity he wants to use within the capacity awarded to him (expressed in MW).
Pré-nominations	Pre-Nominations is a feature offered by Morgan. The use of this feature is not mandatory. The ITRs can submit a nomination before the opening of the nomination gate (during the pre-nomination gate). The characteristics of pre-nominations are : <ul style="list-style-type: none"> • no CapacityAgreementIdentification is used as Programming Authorizations (PA) have not been published

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

Term	Meaning (within the context of this document)
	• ObjectAggregation is A03 (instead of A04)
PA	P rogramming A uthorizations
PTR	P hysical T ransmission R ights
TCA	T ransmission C apacity A llocator
TSO	T ransmission S ystem O perator
UIOSI	U se I t o r S ell I t – refers to mandatory removal and resale of capacity that a CT or ITR is entitled to use but chooses not to, with proceeds of the resale being returned to the original CT
User	A legal person which has been registered to participate in the allocation processes in accordance with the procedures and requirements set forth in the RTE's Rules
LT	L ong T erm
CSV	C omma- S eparated V alues

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

2. Introduction to the MORGAN System

2.1 MORGAN SYSTEM OVERVIEW

The MORGAN system supports the full capacity auction process from the identification and publication of the offered capacity to the publication of allocation results. Capacity allocation is supported by a market based matching process taking as input capacity bids submitted by market participants and available capacities that result from the calculations by the concerned System operators.

The MORGAN system enables to manage explicit auctions on long term and daily horizons. It manages intraday capacity allocation based on a pro-rata algorithm.

The MORGAN system supports also the secondary market process including the transfer of the capacity acquired during long term auctions between market participants and the resale of the capacity acquired during yearly auctions on the monthly auctions.

Finally the MORGAN system supports the full nomination process from the publication of the programming authorizations to the publication of the confirmed nominations.

The MORGAN system enables to manage nomination process for long term, daily and intraday process types.

2.2 WHAT USERS SHOULD KNOW

2.2.1 Technical requirements

Connexion requirements: RTE PKI certificate and specific access to MORGAN.

Version of browser: Internet Explorer 6 or higher or Firefox 3 or higher.

2.2.2 About Data Inputs

Data Inputs into the **MORGAN System** include:

- Capacity Bids that can be
 - Either uploaded as ECAN Bid Document file v4r0 (manually or by email)
 - Or entered on the GUI.
- Capacity Transfers that can be
 - Either uploaded as ECAN Right Document file v4r0 (manually or by email)
 - Or entered on the GUI.
- Capacity Resales that can be

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

- Either uploaded as ECAN Right Document file v4r0 (manually or by email)
 - Or entered on the GUI.
- Capacity Status Requests that can be
 - Either uploaded as ESR Status Request Document file v1r1 (manually or by email)
 - Or entered on the GUI.
- Nominations that can be
 - Either uploaded as ESS Schedule Document file v3r3 (manually or by email)
 - Or entered on the GUI.

A participant can attach several files in one email to MORGAN. It is also possible for 2 different users belonging to 2 different parties to share the same e-mail address, but not for 2 users from the same party.

2.2.3 About Data Outputs

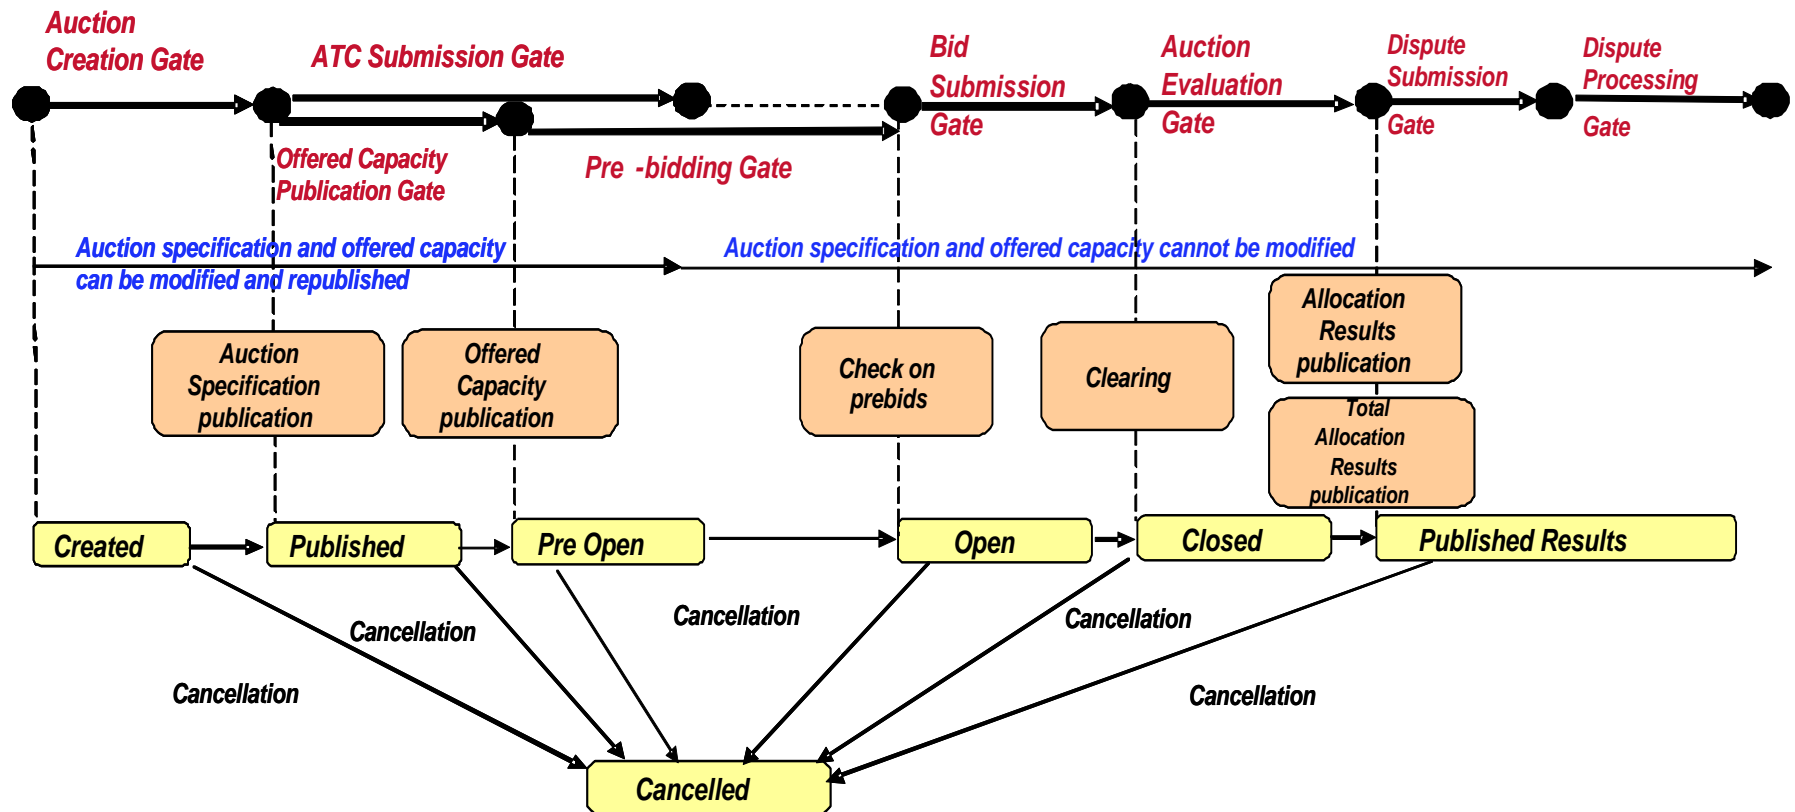

Data outputs from **MORGAN System** include:

- Auction Specification received via email by the participants and downloadable through the GUI by the participants
- Acknowledgment Document (ENTSO ACK document) received via email by the participants and downloadable through the GUI by the participants.
- Allocation result document (ECAN Allocation Result document v4r0) downloadable through the GUI by the participants.
- Capacity Right Portfolio Document (ECAN Rights Document file v4r0) downloadable through the GUI by the participants
- Transfer confirmation as ECAN Rights Document file v4r0 received via email by the participants and downloadable through the GUI by the participants
- Programming Authorizations as ECAN Rights Document file v4r0 received via email by the participants and downloadable through the GUI by the participants
- Nomination Confirmation as ESS Confirmation Report file v3r3 received via email by the participants and downloadable through the GUI by the participants

All these information are also available on the GUI.

Participant Start up User's Guide	Rev 11.4
-----------------------------------	----------

2.2.4 About Capacity Auction

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

Capacity Auction overall process is organized in the following phases:

- Auction publication: Auction specification is published to the market participants.
- Bidding: Market participants submit bids to the auction in order to request transmission capacity. Bids can be submitted during 'Pre-Bidding' gate and 'Bid submission' gate that have been configured and scheduled for the related auction;
- Clearing: Auction results are processed by applying a standard Marginal Price algorithm. This matching process is triggered at Auction evaluation gate opening;
- Allocation results publication: Detailed allocation results are published to the capacity traders in the GUI. This publication is triggered at Auction evaluation gate closure. An email notification is also sent to the capacity traders.
- Dispute: Outside of the capacity auction system, Participants may contest the auction results during the Dispute submission gate. This may lead TCA (Transmission Capacity Allocator) to cancel the auction.

In the **Explicit Auction System**, the life-cycle of an auction is controlled by a set of states. These states are described below:

State name	Description
1. Published	The auction becomes public, and market participants can view the auction.
2. Pre-Open	An auction is in 'Pre-Open' state during the 'Pre-Bidding' gate.
3. Open	An auction is in 'Open' state during the 'Bid submission' gate.
4. Closed	An auction is in 'Closed' state as soon as 'Bid submission' gate closes and while auction results are not published.
5. Published results	The auction results become public; they are available in the participant interface. This is a final state.
6. Cancelled	An auction can be cancelled even if the auction results have been published. An auction which has been cancelled cannot be restored. All gates of a cancelled auction are suspended. This is a final state.

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

3. MORGAN System Features

In the following subsections, the information appearing on screenshots is given for illustration purpose and does not refer to any particular auction rules.

3.1 MAIN SCREEN

The Main screen gives access to the various displays of the application through the menu bar, at the top of the screen, by clicking on a menu or a submenu item.

Every stage in the lifecycle of an auction has one or more screen dedicated to it:

- All documents either produced by or submitted to the MORGAN system are available from a single screen through File menu.
- Once an auction has been published, it can be reviewed in the Auction display through Auction menu.
- Two screens allow participants to review or update their past bids and to submit new ones through Bid menu.
- As soon as an auction has finished, the MORGAN system computes and publishes the allocation results through Allocation results menu.
- Capacity Right Portfolio can be managed through Capacity Rights menu.
- Two screens allow participants to nominate and to review Programming Authorizations and Nominations through the PA & Nominations menu.
- The timing of all the periodic gates can be displayed at any moment from the Gates menu.
- All the activity occurring in the MORGAN system is recorded in an event log, which can be displayed at any moment from the Event Log menu.

In addition, the Options menu allows users to change their password.

Figure 1: Menu

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

In order to provide a user-friendly and consistent experience, the various screens share a common layout, with:

- Filtering criteria pane: the topmost area offers a set of filters that can be used to search auctions, bids, events, allocation results, transfers... depending on the screen currently displayed.
 - To **filter**: in '*Filtering criteria*' pane, select the criteria by clicking on one item in the different lists. Click on the *Refresh* button in the top left corner.
- List pane: at the center, the search result is displayed as a list of items.

Each row provides some summary information on an auction, a bid, a file, an event, a PA.... The list may also display a few action icons for each row, providing a quick way to open or download a file, or to create, modify or cancel a bid.

If more than 12 items need to be displayed, the list is paginated. The navigation buttons at the bottom of the list can be used to browse through the pages.
- Details pane: the bottom of the screen shows all the details about the item currently selected in the list. For an auction, that would be its identification details, the product and the offered capacity or gates.

All this information is organized in multiple tabs.

To see any modification (for instance update of the auction states) participants must refresh the GUI, pressing the Refresh button.

Any area can be hidden or restored by a single click on its title row.

Participant Start up User's Guide	Rev 11.4
-----------------------------------	----------

Filtering criteria pane

List pane

Details pane

Figure 2: Screen Layout

3.2 FILE UPLOAD

The **File Upload screen** allows the upload of a file into the MORGAN system.

To display this screen the participant must select the File menu.

- Participants should select a file on their computer via the browse button.
- Once a file is selected, they should click on the “Upload” button to start the actual upload process. Upload progress can be followed by a progress bar.
- Logging messages let participants monitor the file parsing and see the result of that parsing.

Participant Start up User's Guide	Rev 11.4
-----------------------------------	----------

Figure 3: File Upload

3.3 FILE DOWNLOAD

The **File Download screen** allows a quick overview and the download of files available in the MORGAN system.

To display this screen the participant must select submenu File Download in the File menu.

Participants should use the Document viewer in the File download screen to quickly review the status of a file submitted through upload or generated with one of the “New” screens of the GUI.

To check the acknowledgement file in the File Download screen:

1. Filter on file type
2. Filter on a period including the time when the file has been registered or the market period referred to on the searched file
3. Check the acknowledgement status
 - ▶ A01 for fully accepted,
 - ▶ A02 fully rejected,

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

- ▶ A03 message contains errors at the time series level. Only valid time series have been stored in the database, others have been rejected
- ▶ Z01 message is accepted at the technical level but will be processed later to validate data
- ▶ Z02 message contains errors at the time series level. Only valid time series have been stored in the database, others have been rejected ; the valid time series will be processed later to validate data

4. Filter on Horizon

5. Use the document viewer icon to check the contents of the acknowledgement file

4. Participant Tasks

4.1 PROGRAMMING AUTHORIZATION MANAGEMENT

4.1.1 Background on Programming authorizations

Periodic/long term and day-ahead Programming Authorizations are hourly data related to contracts associated to capacity rights. For a given trader, they correspond to the finalized capacity right portfolio for the target market day and the target timeframe.

Programming Authorizations are dealing with a single given market day.

For each market day, one file is sent by mail to each Capacity Trader party collecting all long-term programming authorizations for which they will play their ITR role and nominate. This file is also downloadable through the GUI by the participants.

For each market day, one file is sent by mail to each Capacity Trader party collecting all daily programming authorizations for which they will play their ITR role and nominate. This file is also downloadable through the GUI by the participants.

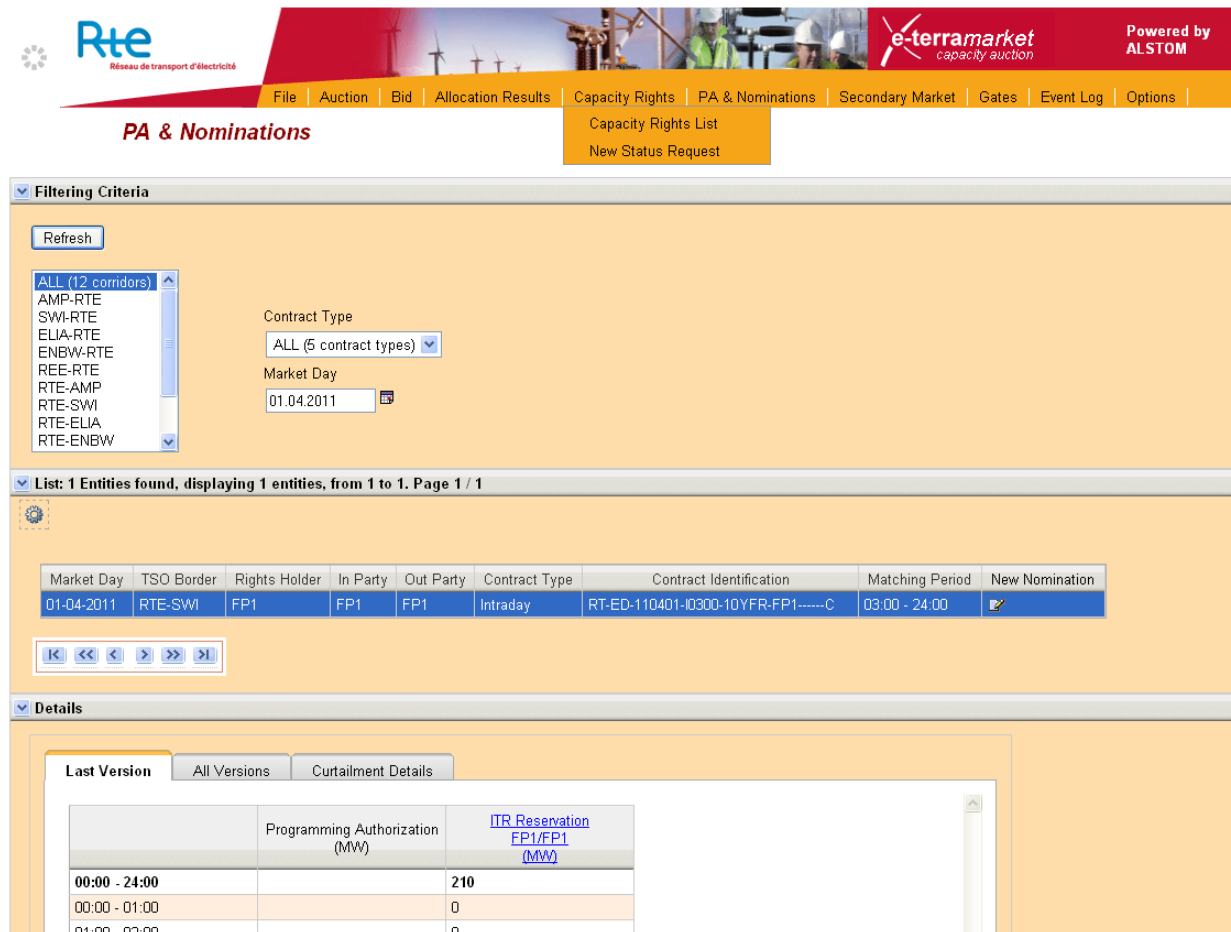

4.1.2 Displaying details of Programming authorizations

Details of Programming Authorizations can be seen in the Programming Authorizations & Nominations screen available through submenu 'View PA& Nominations' in the 'PA & Nominations' menu

Figure 6 PA & Nominations menu option

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

The list of contracts determined by the filtering includes the major characteristics of the contracts on which programming authorizations have been determined: market day, TSO border, rights holder, ITR in Area, ITR out Area, contract type, contract identification and matching period.

Select a contract among the list to get the details of the Programming Authorizations for the selected day on that contract.

The line “00:00 – 24:00” displayed in bold shows the sum of all quantities in the Time Series.

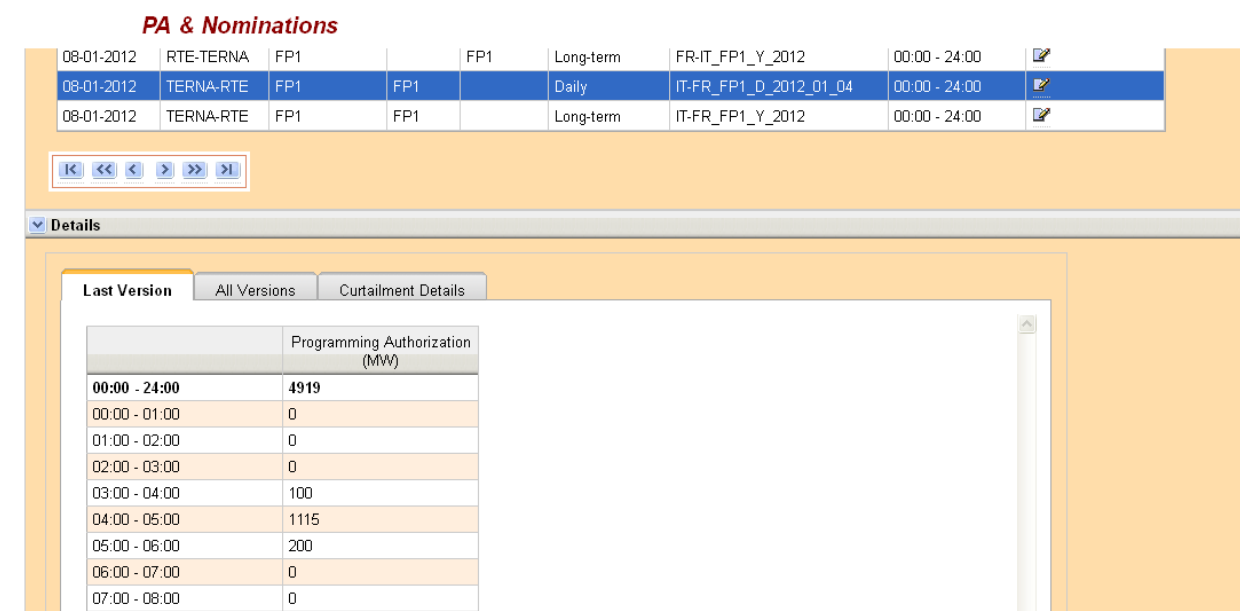

Figure 8 Details of Programming Authorizations

4.1.3 Manual transmission of Programming authorizations

Programming Authorizations (PA) are automatically generated and sent to CTs and ITRs at the closure of the “Periodic PA to CT and ITR” gate for Periodic PA and “Daily PA to CT and ITR” gate for daily PA. Since the version 11.1 of MORGAN, the operators cannot force anymore the manual generation of Programming Authorizations.

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

4.2 Nomination and pre-nomination Management

4.2.1 Background on nominations and pre-nominations

From the programming authorizations, ITR parties submit nominations to MORGAN system. When the appropriate nomination submission gate closes, the last versions of valid submitted nominations are the one which are took into consideration for the matching with other TSOs. After the matching and at the closure of the “Daily Nomination Correction” gate, all the matched periodic and daily nominations are sent to ITRs as “Confirmation reports”. As for programming authorizations, nominations are hourly data related to contracts associated to capacity rights. They are dealing with a single given market day.

Depending on Horizon and Border, granularity of Nominations could go from 1 MW to 0,001 MW. The system will automatically check the consistency of granularity in any Nomination submitted into the system.

ITRs may submit pre-nominations to MORGAN during pre-nomination gate which ends at the publication of PA to ITRs. Pre-Nominations don't contain any reference to the programming authorizations (The Object Aggregation is in this case A03: Party).

When the Nomination Submission Gate opens, the system generates a new nomination version from the pre-nomination containing the reference of the published PA. If the nomination is higher than the PA, the nomination will be shaved to the Programming Authorization quantity and the System will generate and send an Anomaly Report to the participant (see 4.2.6). When the nomination is created by the system from the pre-nomination, the version of the pre-nomination is increased. If the participant wants to modify the nomination, he should create an updated version of the nomination. If the pre-nomination was in version 2, the nomination generated by the system will be in version 3 and the updated nomination submitted by the participant should be in version 4 or higher. During the Nomination Submission gate, if the System receives a new valid PA, for each nomination related to this PA, the system will generate a new nomination version from the former nomination and according the PA quantity, generates an Anomaly Report if needed.

After closure of the nomination submission gate, a “Nomination Correction” gate opens. During that gate, ITRs are no longer allowed to submit new versions of nominations but RTE operators may **exceptionally** submit or modify nominations

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

on behalf of ITRs according to the modalities described in the French Import/export Rules. When the confirmed nomination corresponds to the last valid version declared by ITRs, no new version is stored in MORGAN. Else a new version is stored as "Imposed Nomination".

The confirmed nomination may simultaneously contain updated and unchanged time series. For updated time series, the time series version number is the same as the new document version.

If one or more nominations are curtailed, a Reason element is present for each curtailed value (at the Interval level). The new version of nomination stored in MORGAN will appear as "Curtailed Nomination".

4.2.2 Displaying details of Nominations

Details of Nominations can be seen in the Programming Authorizations & Nominations screen:

- Go to PA & Nominations -> View PA & Nominations

- Contract type (long-term, yearly, monthly, daily, intraday or total)

The list of contracts determined by the filtering includes the major characteristics of the contracts on which programming authorizations have been determined: market

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

day, TSO border, rights holder, ITR in Area, ITR out Area, contract type, contract identification and auction identification.

Press the icon in the new nomination column allows the participant to submit a nomination linked to the selected PA through the GUI.

Select a contract among the list to get the details of the Nominations for the selected day on that contract.

The details section of the PA & Nominations screen includes 3 tabs to show for the selected contract on all hours of the selected day either the last version of nomination, or all nomination versions, or the details of curtailment if a curtailment was applied on the nomination.

4.2.2.1 Last Version tab

The left column displays the hourly schedule of Programming Authorization.

If no nomination was submitted yet by the ITR, there is no other column.

Last Version		All Versions	Curtailment Details

Figure 13 Last Version tab – Curtailed nomination

Particular case of intraday process:

In the particular case of intraday nominations (Swiss border, German border and Belgian border), the allocation process is not an auction: instead of bidding, participants submit “Reservations”. Then Programming Authorizations are determined by MORGAN based on those reservations. Then Nominations can be submitted as usual. The PA & Nomination screen has been enhanced so that both processes of allocations and nominations can be visualized. Consequently, the Last Version tab will display

- The last valid “Reservation”
- The Programming Authorization
- The last valid Nomination

Figure 20 New Nomination screen

► To declare a new nomination:

Fill up the following sections and press the Save button when complete

- Nomination General Parameters:
 - Corridor: TSO-oriented corridor
 - Process type: Long-term, Day-ahead or Intraday
 - Delivery Day
 - Gate: one of the various gates when nomination can be declared. After selecting corridor, process type and delivery day, only open gates for the selection will show up in the Gate combo box. Depending on the corridor and process type, the gate may be one of the following:

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

- Periodic Pre-nomination
- Periodic Nomination submission
- Periodic Nomination correction
- Daily Pre-nomination
- Daily Nomination submission
- Daily Nomination correction
- Intraday Reservation
- Intraday Nomination
- Intraday Nomination Correction
- LT Swiss Reservation
- LT Swiss Nomination
- Daily Swiss Nomination
- Daily Swiss Correction
- Nomination Parameters:
 - Sender: the owner of programming authorizations
 - Capacity Type (long-term, yearly, monthly, daily, intraday)
 - Capacity Agreement Identification
 - Counterparty: set to the default counterparty. Can be changed for nomination on Italian border. In that case several nominations linked to different counterparties can be submitted related to the same PA.
- Nomination Volume: Enter a quantity for relevant hours of the delivery day. The quantity should not be higher than the Programming Authorization.
 - As a shortcut to quickly enter nomination quantities, a percentage of programming authorization can be specified; pressing the “Set for whole period” will apply the percentage on all hours of the delivery day
 - As another shortcut to quickly fill up the 24 hours of the daily nomination schedule, users can copy a selection of 24 values in an Excel sheet and press CTRL-V in the web page to paste that selection into the form of the New Nomination screen

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

- As another shortcut to quickly enter nomination quantities, click on down arrow field next to quantity to report the quantity value to all subsequent hours.

This action brings up a page where Participant Operators can immediately see the acknowledgement status of their request.

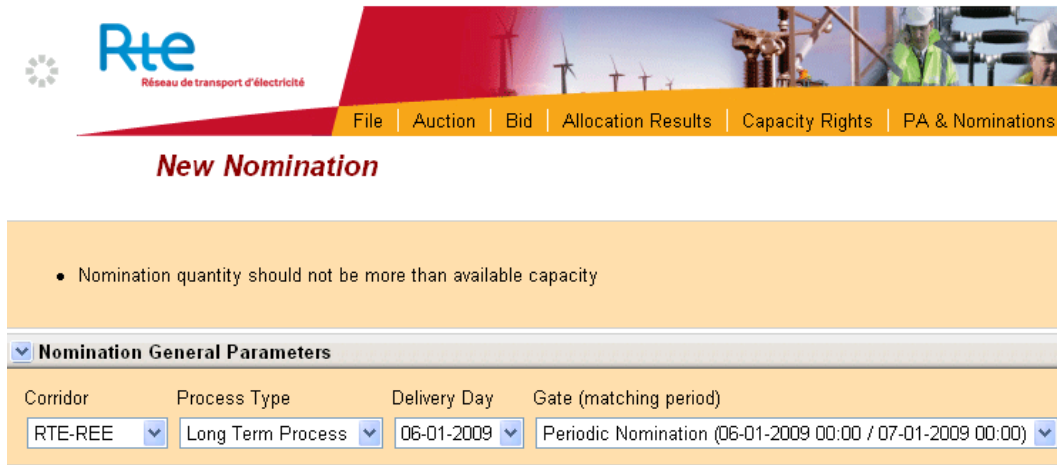

Logging Time	Message	Severity	User	Corridor	Market Period Start	Market Period Stop	Acknowledgement
02-01-2009 19:05:06	A new file 'NT4111702151.xml' has been detected by the system, start of analysis of this new file	INF	FP1-TR				
02-01-2009 19:05:06	Parsing of schedule file 'NT4111702151.xml' ended. File is 'fully accepted'	INF	FP1-TR		06-01-2009 00:00	07-01-2009 00:00	

Figure 21 New Nomination acknowledgement screen

The status of the nomination declaration can also be checked in the Event Log and in the File Download screen.(view section 3.3 and 3.4)

If, for at least one hour, the nomination quantity is higher than the programming authorization, a message will appear on top of the screen and the requested nomination will not be saved.

4.2.4 Modifying a Nomination through GUI

The procedure described in this section explains how ITRs can modify nominations.

► To Modify a nomination:

Bring up the PA & Nomination screen

Filter contracts so that the desired contract for which nominations need to be modified is listed.

Select that contract from the list

In the Last Version tab of the nomination details, press the link on the ITR Nomination header that should be available if the pre-nomination or nomination gate is open.

Figure 24 Update Nomination screen

Modify the quantities for relevant hours of the delivery day. The quantity should not be higher than the Programming Authorization.

As a shortcut to quickly enter nomination quantities, a percentage of programming authorization can be specified; pressing the “Set for whole period” will apply the percentage on all hours of the delivery day.

As another shortcut to quickly fill up the 24 hours of the daily nomination schedule, users can copy a selection of 24 values in an Excel sheet and press CTRL-V in the web page to paste that selection into the form of the New Nomination screen

As another shortcut to quickly enter nomination quantities, click on down arrow field next to quantity to report the quantity value to all subsequent hours.

Press the Save button when complete.

Participant Start up User's Guide		Rev 11.4
-----------------------------------	--	----------

In addition to the acknowledgement screen that shows up, the status of the nomination re-declaration can be checked in the Event Log and in the File Management screen.

If, for at least one hour, the nomination quantity is higher than the programming authorization, a message will appear on top of the screen and the modification will be rejected.

4.2.5 Submit a Nomination through File Upload

The procedure to upload a nomination file into the system is the generic procedure to upload a file into the capacity auction system (see section 3.2) done from the File Upload screen. The parsing follow-up and the review of acknowledgement can be done with either Event log or File Download screen. Please refer to preliminary sections to get the detailed instructions on how to upload a file, check the acknowledgement status and review the details of acknowledgement.

Some examples of nomination document are attached in the annexes of this document.

4.2.6 Nomination Anomaly Report

When the Nomination gate opens, the system retrieve the PA associated to each pre-nomination, and generate an incremented version of the document containing the retrieved PA Identification. This version is submitted into the system as a usual Nomination Document.

If some Nominations are higher than the new Programming Authorization, they will be shaved to the Programming Authorization quantity and the system will generate an Anomaly Report Document to inform the participant of the new quantity along a specific Reason "The nomination was shaved to respect the maximum allowed quantity". It will also specifically state if a Nomination gets rejected because no PA are corresponding the Nomination.

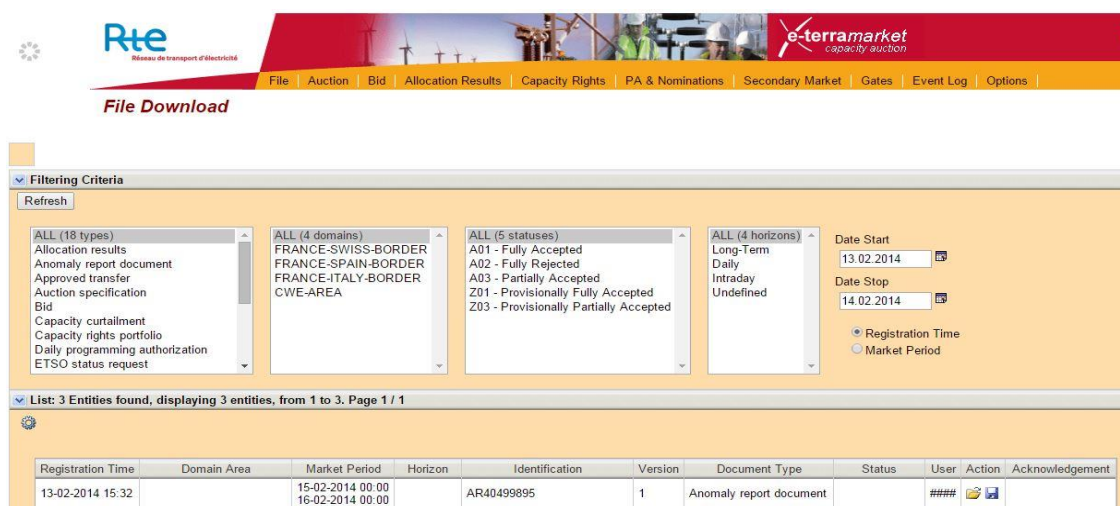

Programming Authorizations may be updated after the Nomination Submission Gate Opening, including when Nomination have already been declared.

In that eventuality, the system will resubmit all Nominations concerned by the new Programming Authorization version. If some Nominations are higher than the new Programming Authorization, they will be shaved to the Programming Authorization

Participant Start up User's Guide	Rev 11.4
--	-----------------

quantity and the system will generate an Anomaly Report Document to inform the participant of the new quantity along a specific Reason “The nomination was shaved to respect the maximum allowed quantity”.

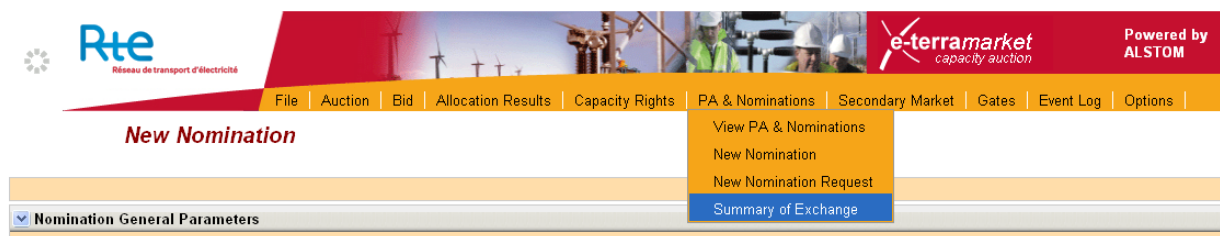

An Anomaly Report document can be downloaded through the File Management screen by clicking on download button.

4.3 Summary of Exchanges

It is possible for a participant to have an overview of all declared exchanges for a given delivery date.

Participants can bring up that screen selecting submenu ‘Overview of exchange’ in the ‘PA & Nominations’ menu.

This brings up the Summary of Exchange screen which shows the following values:

Participant Start up User's Guide	Rev 11.4
--	-----------------

- A Total line where the sum of all nomination is displayed (import being negative and export positive)
- Total Export and Total Import lines which display respectively the sum of export nominations and the sum of import nominations
- 3 lines per country border with net, export and import values

All data can be filtered for a selected area or country border, a selected Contract Type and is displayed for a selected delivery date.

The screenshot displays the 'Summary of Exchange' section of the e-terramarket capacity auction interface. At the top, there is a navigation bar with tabs: File, Auction, Bid, Allocation Results, Capacity Rights, PA & Nominations, Secondary Market, Gates, Event Log, and Options. Below this, the 'Filtering Criteria' section allows users to select an Area (ALL (4 areas), FRANCE-SWISS-BORDER, FRANCE-SPAIN-BORDER, FRANCE-ITALY-BORDER, CWE-AREA) and a Contract Type (ALL (5 contract types), A01 - Daily, A03 - Monthly, A04 - Yearly, A06 - LongTerm, A07 - Intraday). It also includes fields for Start Date (01.12.2015) and Stop Date (01.12.2015), and an 'Export' button. The 'Summary of Exchange' section contains three tables. The first table shows 'Total' values for all areas. The second table shows 'Total Export' and 'Total Import' values. The third table shows 'Total', 'Export', and 'Import' values for Belgium and Switzerland. Each table has columns for dates from 00-01 to 23-00.

The button “Export” is used to generate an Excel document including two tabs:

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

- **PA&Nominations Summary:** this contains for each oriented country border and for each market day hourly interval, the sum of last valid version of PA and the sum of last version of Nominations relative to the selected process type and the selected matching period
- **PA&Nominations Details:** containing for each market day hourly interval, the detailed list of last valid version of PA and last valid version of Nominations relative to the selected process type and the selected matching period grouped by oriented country border. That list includes the following columns:
 - TSO oriented border
 - Market day
 - Capacity Type
 - In Party
 - Out Party
 - Type (PA or Nomination)
 - Values for each hourly interval

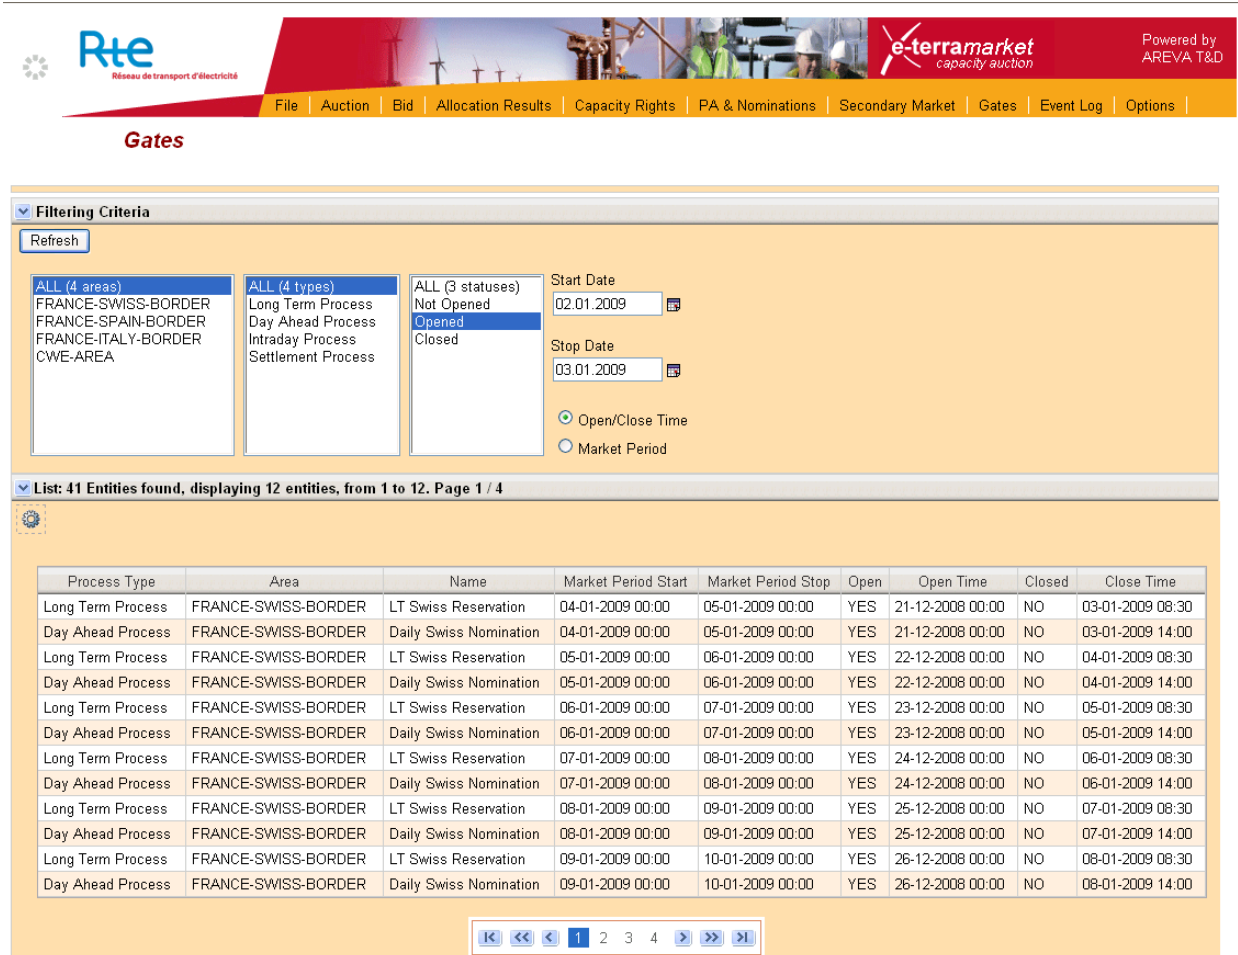

To generate such an Excel file, execute the following steps:

- Select the Area concerned;
- Select the process/contract type (Daily, Monthly, Yearly, LongTerm for Historical Capacity or Intraday)
- Select the Market day for which PA & Nominations have to be collected
- Press the Export button

Figure 25 Gates screen

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

Gates screen fields:

Field Name	Description
Process Type	Longterm, Dayahead, Intraday or Settlement
Area	Domain area
Name	Gate name
Market Period Start	Start of target market day. Format is "DD-MM-YYYY hh:mm", local time.
Market Period Stop	End of target market day. Format is "DD-MM-YYYY hh:mm", local time.
Open	YES / NO
Open Time	Time when the gate opens Format is "DD-MM-YYYY hh:mm", local time. Can be chosen from a calendar Is empty if open mode is set to Manual and if gate is not opened yet.
Closed	YES / NO
Closure Time	Time when the gate opens Format is "DD-MM-YYYY hh:mm", local time. Can be chosen from a calendar Is empty if closure mode is set to Manual and if gate is not closed yet

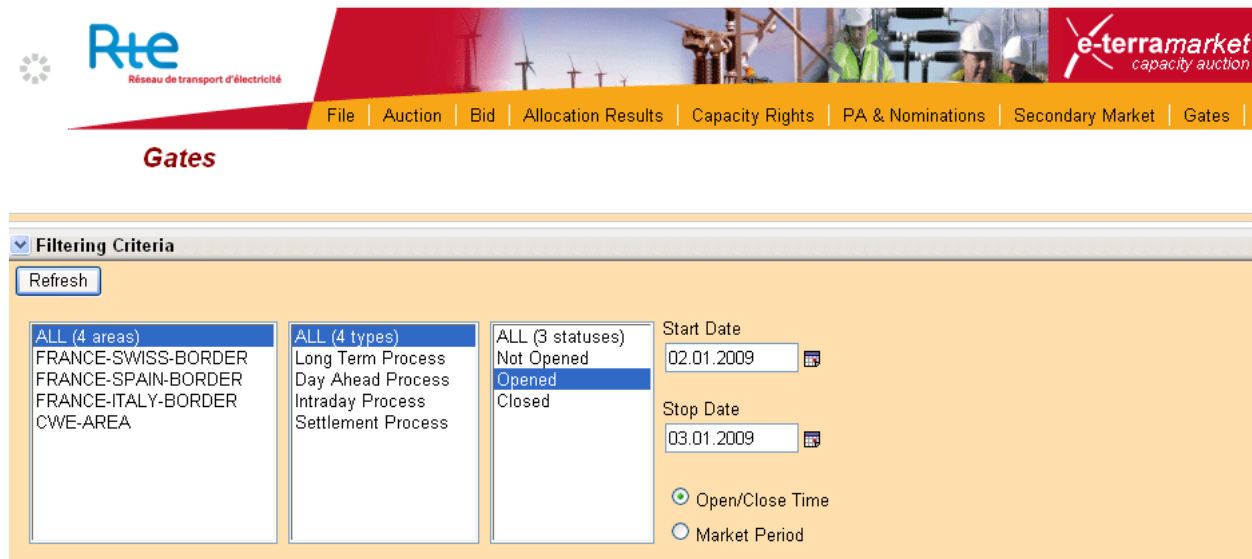

► To filter the data in the Gates screen:

- Select the Domain Area:
 - All: Any domain area
 - FRANCE-SWITZERLAND border

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

- FRANCE-SPAIN border
- FRANCE-ITALY border
- CWE-AREA
- Select the Process Type:
 - All: any process type
 - Longterm,
 - Dayahead,
 - Intraday
 - Settlement
- Select the Gate Status :
 - All : any status
 - Not Opened: Open = NO
 - Opened: Open=YES and Closed=NO
 - Closed: Open=YES and Closed=YES
- Start and Stop Date:
 - Start Date: beginning of the filtering interval
 - Stop Date: End of the filtering interval
 - Open/Close Time mode: This selection will return gates where the interval defined by [Gate Open Time, Gate Closure Time] intersects the filtering interval
 - Market Period mode: This selection will return gates where the interval defined by [Market Period Start, Market Period Stop] intersects the filtering interval

Participant Start up User's Guide	Rev 11.4
--	-----------------

The screenshot shows the 'Gates' section of the e-terramarket capacity auction website. It features a navigation bar with links: File, Auction, Bid, Allocation Results, Capacity Rights, PA & Nominations, Secondary Market, and Gates. Below the navigation bar, the 'Gates' title is displayed. The main content area is titled 'Filtering Criteria' and includes a 'Refresh' button. There are three dropdown menus for filtering: 'ALL (4 areas)' with options: FRANCE-SWISS-BORDER, FRANCE-SPAIN-BORDER, FRANCE-ITALY-BORDER, and CWE-AREA; 'ALL (4 types)' with options: Long Term Process, Day Ahead Process, Intraday Process, and Settlement Process; and 'ALL (3 statuses)' with options: Not Opened, Opened (selected), and Closed. To the right of these menus are date pickers for 'Start Date' (02.01.2009) and 'Stop Date' (03.01.2009). At the bottom right, there are two radio buttons: 'Open/Close Time' (selected) and 'Market Period'.

Figure 26 Filters in Gates screen

The table below summarizes the gates that are eventually scheduled every day on a given border for a given process type.

Process type	Gate	Border
Long-Term	Periodic PA to CT and ITR	Italy, Spain, Swiss
	Periodic Pre-Nomination	Italy, Spain, CWE, Swiss
	Periodic Nomination	Italy, Spain, CWE, Swiss
	Periodic Nomination Correction	Italy, Spain, CWE, Swiss
	Periodic Curtailment	Italy, Spain, CWE, Swiss
Day-Ahead		
	Daily Pre-Nomination	Italy, Swiss

Participant Start up User's Guide		Rev 11.4
--	--	-----------------

	Daily Nomination	Italy, Spain, CWE, Swiss
	Daily Nomination Correction	Italy, Spain, CWE, Swiss
	Daily Swiss Correction	Switzerland
Intraday	Intraday Reservation	CWE
	Intraday Nomination	CWE
	Intraday Nomination Correction	CWE
